To
IBC Network Foundation

Re: Letter of Appreciation

I am writing to express my immense gratitude to The IBC Network Foundation and to Ms. Terry Arnold for her collaboration, and to share some of the recent research highlights that were supported in part by The IBC Network Foundation. This research explores why some tumors are more aggressive and treatment resistant, with the goal of developing better treatments for these tumors.

The invaluable support of the IBC Network Foundation allows the Devi Cell Death Laboratory to continue our unique research into aggressive, treatment resistant tumors -- why they occur and how they can be stopped. We hope to save lives by preventing IBC progression and metastasis, and by training a new generation of cancer researchers through the hands-on, highly mentored experience learners gain in our laboratory. The Foundation also supports our essential work with breast cancer advocates, ensuring that our patient community's voices inform every aspect of our work.

Sincerely,

Gay Devi
